# ISOLATOR™

## TECHNIQUE FOR LOADING "THE ISOLATOR" WITH COTTON ROLLS.

1. Firmly hold the ISOLATOR in the position illustrated, gripping the connecting loop close to the jaw being loaded

2. Use the cotton roll to pry back the jaw of the holder as illustrated.

3. Roll the cotton roll down into the open jaw.

4. Once the cotton roll is firmly positioned in the jaws of the holder, release the cotton roll, allowing the jaws to seek their original shape. The cotton roll should be firmly secured.

Caution: Reusing the Isolator puts patients at increased risk for injury or infection.
